Dr. Joshua Ledeborg
Stanford University Medical School
Palo Alto, California

Dear Dr. Ledeborg:

I am opposed to nuclear generators, and may have an opportunity to intervene at hearings for two new nuclear generators here in New Jersey. In getting my facts together, I came across a news clipping about a statement that you made - "the cost of genetic damage to future generations from nuclear power would approach \$10 billion a year". Can you elaborate on this for me? I want to use your statement as evidence, but should have more details to make it meaningful. I will appreciate any material or information relating to this that you could send me.

The hearings should be soon, so thank you for a prompt reply.

Sincerely,

David A. Caccia

David A. Caccia

*As you can see my statement has been misquoted:
out of context, so as an adversary you probably will
prefer to ignore it. My discussion does not
however deal with problems of accidents which in
my view is the main arena of legitimate concern.*

J.C.
